

Cinte Tectextil China is the ideal trade fair for technical textile and nonwoven products in Asia. This year the fair welcomes **SANITIZED (China) Ltd** from **China** to showcase their **antimicrobials for polymers and textiles**.

(Detailed product info featured on page 2.)

Sanitized® is a brand name and a seal of confidence

SANITIZED is the leading worldwide producer of antimicrobial hygiene function and material protection for textiles and polymers. For over 80 years, the company has been doing pioneering work and developing innovative, effective and safe technologies for antimicrobial treatments:

- Antibacterial products
- Products against mold and mildew
- Active ingredients against material deterioration
- Products against dust mites
- In-can and dry film preservation of paints

The Sanitized® hygiene function combines freshness, comfort and material protection, which are all aspects that can be used in textiles and polymers. The technology prevents the growth of bacteria, fungi, algae or dust mites, undesirable odors, staining and material fatigue.

SANITIZED is global by nature and are deeply committed to their Swiss roots. Especially when it comes to the therewith accompanied demands for safety and quality, which are both firmly established in the company and form their guiding principles. The conserving of resources and sustainability have been on the agenda for many years.

SANITIZED promised service performance:

- *Innovative solutions for your products*
- *360-degree service: support from development to marketing*
- *Highest quality for antimicrobial efficacy*
- *Verified safety due to highest quality standards*
- *Decades of experience*
- *Differentiation from the competition*

Sanitized® material and surface protection for polymers

Antimicrobial treatment reliably prolongs the life of polymers like tarpaulins, tents, marquees, or architectural textiles and keeps them looking like new as long as possible. Treating polymer surfaces in the kitchen, in the food industry or in hospitals with antimicrobial protection contributes to a comprehensive hygiene management. Sanitized® sustainably hinders the emergence and spread of damaging germs and provides lasting protection for the articles.

Unique competence in non-woven sector

Sanitized® stands out in the field of non-woven and technical materials through its unique qualities and outstanding capabilities. Whether in medical and household hygiene or for filters and base materials: Sanitized® is the convincing solution that stands for the best possible material protection and hygiene function.

Feel the difference of Sanitized® treated odor-free clothing

The Sanitized® hygiene function is the sustainable choice for more freshness and permanent odor-management:
Sportswear; Socks and Hosiery; Underwear; Outdoor Apparel; Shoes and Insoles; Urban and Leisure Wear; Business Clothing; Workwear

CORONA CRISIS: The Importance of Comprehensive hygiene management

Tests conducted by independent laboratories have confirmed that several Sanitized® products have an effectiveness against viruses on polymer surfaces and textile applications.

Sanitized® additives are the perfect tool for an antiviral and antibacterial treatment of different polymer types and textiles that play a central role in personal protection equipment, facemasks, apparel, hometextiles, healthcare applications, technical applications, mattress protectors, public transportation, food industry or everyday necessities. Before any product's antiviral properties can be claimed, viral tests must be performed of the treated articles in specialized laboratories. Compliance with local legal regulations is essential here. SANITIZED AG explicitly points out that this is a standard procedure and has composed a preliminary SANITIZED Regulatory Guide.

"We are proud to further support hygiene in the health care system with our Sanitized® antiviral additives"

Urs Stalder, CEO, SANITIZED

Medical non-wovens.

Greatest possible protection:

In hospitals, operating rooms and in all areas, where people enjoy medical care and treatment, hygiene is the primary concern. Non-woven material with the integrated Sanitized® hygiene function offer the greatest possible protection.

Antimicrobials for filters.

First-class quality:

Filter systems with an integrated Sanitized® hygiene function are durably protected against the development of bacteria, biofilm, odors, fungi and algae.

"The outbreak of corona virus indeed will make the hygiene and safety concept more popular than ever before. The market demand of the antimicrobial treated products will be in an growing trend. Meanwhile, a systematic regulation is expected to be adopted therefore the market will develop in a more organized and regulated way."

Christine Niklas, Product Manager Polymer, SANITIZED AG
